End

Semitropical Chichi Jima.

The dark-blue waters around the Bonins teem with fish—wahoo up to 100 pounds, mackerel, tuna, rock cod, and many varieties of small reef fish. Schools of sardines scud through shallow waters like dark clouds. The islands supported a major fishery and two Japanese whaling stations before the war.

Chichi fishermen regularly cross the open sea to the now-uninhabited isles of Muko Jima, 40 miles away, and Haha Jima, 25 miles, when fishing promises to be better there.

Siren song of the sea holds fisherman Willie Savory as it did his forefathers—sailors, seal hunters, and whalers. Off Chichi's harbor he harpoons the hard-fighting wahoo with the spear resting between forked sticks on the red outrigger of his canoe. Dropping a bright fish-shaped lure, Mr. Savory will watch for wahoo, or giant mackerel, through a glass-bottom "look box." Closer to shore, he hunts sea turtles.

CPYRGHT

**Up goes the flag.** Americans take Suribachi on February 23, a moment immortalized by Associated Press photographer Joe Rosenthal. For the next 23 years the Stars and Stripes flew from the height day and night. Now a copper reproduction of the flag honors the campaign in which, in Adm. Chester W. Nimitz's words, "uncommon valor was a common virtue."

**Rusty wreckage of battle,** a remnant of a Japanese tracked vehicle appears on an Iwo beach; the restless sea constantly exposes and buries such debris. Plans call for the U.S. to continue operating loran (long-range navigation) stations on Iwo and Marcus Islands.

CPYRGHT

D-Day on Iwo Jima: Marines hit the beach on February 19, 1945. Struggling through volcanic ash, they isolate 548-foot Mount Suribachi, only high ground on the eight-square-mile island. Some 21,000 Japanese defenders, concealed in caves, blockhouses, and pillboxes, fought on for a month. The death toll: 6,821 Americans and all but 1,083 Japanese.
